

Activity 1: Sign In to Microsoft 365 Copilot and Set the Ground Rules

Duration: 25 minutes **Roles:** Every learner, working individually

Scenario

You are joining the hiring team at FutureTech Solutions. Before you touch candidate data you must know which AI tool is approved, and what may never be pasted into it.

Goal and output

A working Copilot session, a first prompt, and a written list of data you will never paste.

Tools and data boundary

Microsoft 365 Copilot (m365.cloud.microsoft) | training account supplied by the trainer

Use only supplied de-identified training data. Do not enter live candidate data, employer-confidential information or production API keys.

Detailed step-by-step

Step 1

Open m365.cloud.microsoft and sign in with the training account shown on the opening slide. The trainer gives the password in class.

Step 2

Open Copilot Chat and confirm you are in the work (tenant) context, not a personal account.

Step 3

Ask Copilot: 'Summarise what the Tripartite Guidelines on Fair Employment Practices say an interviewer must not ask about.'

Step 4

Read the answer and mark any statement you would need to verify against the MOM or TAFEP source.

Step 5

Open HR-POL-02 in the SharePoint HR-Policies library and list the data classes that must be removed before prompting.

Step 6

Write your personal do-not-paste list: NRIC, date of birth, photograph, address, nationality, marital and family status, health.

Evidence files

- do_not_paste.txt
- first_prompt.txt

Recovery and troubleshooting

If the tool output is missing, generic, biased or ungrounded, preserve the input and output, mark the item as rejected, revise one constraint at a time, and regenerate. If access fails, use the supplied templates and local/demo mode; do not substitute live candidate data.

Completion criterion

A working Copilot session, a first prompt, and a written list of data you will never paste.
