

Activity 2: Build the Interview Evidence Contract with Copilot

Duration: 35 minutes **Roles:** Hiring manager, interviewer, candidate advocate

Scenario

FutureTech needs a Senior Data Analyst and has only a broad job description. You must turn it into observable evidence before any question is written.

Goal and output

A competency map, interview objective, evidence rules and a prompt that produced them.

Tools and data boundary

Microsoft 365 Copilot | JD - Senior Data Analyst.md in the FutureTech SharePoint site

Use only supplied de-identified training data. Do not enter live candidate data, employer-confidential information or production API keys.

Detailed step-by-step

Step 1

Open the approved job description from the FutureTech-Careers SharePoint site.

Step 2

Write a ROLE-CONTEXT-TASK-CONSTRAINTS prompt asking Copilot to convert five job tasks into observable behaviours.

Step 3

Add the constraint: 'Reject any criterion that cannot be observed in an interview, and say why.'

Step 4

Review every suggestion. Approve, edit or reject each one and record the reason - this is the human decision record.

Step 5

Ask Copilot to challenge you: 'Which competency for this role am I missing, and what job task is your evidence?'

Step 6

Assign panel roles: chair, question owner, evidence scribe and independent rater.

Evidence files

- evidence_contract.csv
- prompt_log.txt

Recovery and troubleshooting

If the tool output is missing, generic, biased or ungrounded, preserve the input and output, mark the item as rejected, revise one constraint at a time, and regenerate. If access fails, use the supplied templates and local/demo mode; do not substitute live candidate data.

Completion criterion

A competency map, interview objective, evidence rules and a prompt that produced them.
