

Activity 5: Generate a Structured Interview Pack with the Question Designer Agent

Duration: 40 minutes **Roles:** Interviewer and independent quality reviewer

Scenario

You need a consistent, defensible interview pack for the Senior Data Analyst role.

Goal and output

A reviewed interview guide with questions, competency tags, neutral probes and 1/3/5/N-E anchors.

Tools and data boundary

Question Designer (KEEP) agent in Copilot Studio

Use only supplied de-identified training data. Do not enter live candidate data, employer-confidential information or production API keys.

Detailed step-by-step

Step 1

Open the Question Designer agent and request a pack for the Senior Data Analyst role.

Step 2

Check that every question maps to a competency in your evidence contract from Activity 2.

Step 3

Verify the mix includes behavioural, situational and technical questions.

Step 4

Check every probe is neutral: it must clarify evidence without signalling the desired answer.

Step 5

Check every anchor describes observable evidence, never style or personality, and that N/E is defined.

Step 6

Reject or rewrite any item that fails. Record what you changed and why.

Step 7

Ask the agent for one question you should NOT ask for this role, and explain why it is unlawful or unfair.

Evidence files

- interview_pack.csv
- candidate_profile.txt

Recovery and troubleshooting

If the tool output is missing, generic, biased or ungrounded, preserve the input and output, mark the item as rejected, revise one constraint at a time, and regenerate. If access fails, use the supplied templates and local/demo mode; do not substitute live candidate data.

Completion criterion

A reviewed interview guide with questions, competency tags, neutral probes and 1/3/5/N-E anchors.
