

Activity 7: Run an Accessible Virtual Interview

Duration: 30 minutes **Roles:** Interviewer, interviewee and technology observer

Scenario

A remote interview experiences audio lag and a short disconnection during a scored answer.

Goal and output

A recovery protocol, repeated evidence segment and access-equivalent scoring decision.

Tools and data boundary

Video meeting simulation, timer, incident log

Use only supplied de-identified training data. Do not enter live candidate data, employer-confidential information or production API keys.

Detailed step-by-step

Step 1

Agree the backup channel, interruption cue and note-taking practice before starting.

Step 2

Run the opening and first question with deliberate turn-taking cues.

Step 3

Observer triggers the scenario card: audio loss during the result statement.

Step 4

Pause scoring, restore access and repeat only the affected prompt and response.

Step 5

Record the incident without attributing it to candidate competence.

Step 6

Debrief how culture, disability, anxiety and technology can affect nonverbal interpretation.

Evidence files

- incident_log.csv

Recovery and troubleshooting

If the tool output is missing, generic, biased or ungrounded, preserve the input and output, mark the item as rejected, revise one constraint at a time, and regenerate. If access fails, use the supplied templates and local/demo mode; do not substitute live candidate data.

Completion criterion

A recovery protocol, repeated evidence segment and access-equivalent scoring decision.
