

Activity 8: Score Evidence and Calibrate the Panel

Duration: 40 minutes **Roles:** Three independent raters and calibration chair

Scenario

Three raters disagree on the same Candidate A interview transcript.

Goal and output

Independent scores, discrepancy discussion and a documented calibrated result.

Tools and data boundary

Transcript, anchored rubric, evidence matrix

Use only supplied de-identified training data. Do not enter live candidate data, employer-confidential information or production API keys.

Detailed step-by-step

Step 1

Each rater reviews the same transcript and highlights direct evidence by competency.

Step 2

Assign scores independently, including N/E where evidence is missing.

Step 3

Reveal scores only after all raters lock their initial decision.

Step 4

Discuss differences of two or more points by citing evidence and anchors.

Step 5

Revise a score only when the evidence or anchor interpretation changes.

Step 6

Record any rubric wording that caused disagreement for later improvement.

Evidence files

- evidence_matrix.csv

Recovery and troubleshooting

If the tool output is missing, generic, biased or ungrounded, preserve the input and output, mark the item as rejected, revise one constraint at a time, and regenerate. If access fails, use the supplied templates and local/demo mode; do not substitute live candidate data.

Completion criterion

Independent scores, discrepancy discussion and a documented calibrated result.
